

**AMENDMENTS TO THE CLAIMS**

1. **(Canceled)**
2. **(Currently amended)** A method for promoting neuronal cell growth, comprising contacting a neuron with a composition, the composition comprising a component selected from:  
  
a neurotrophic cytokine antagonist, a retinoid antagonist, or a cAMP-dependent messenger pathway inhibitor; (i) a monoclonal antibody to a gp130 protein, (ii) phosphatidylinositol-specific phospholipase C (PI-PLC), (iii) a (2-p-bromocinnamylaminoethyl)-5-isoquinolinesulfonamide, (iv) an enantiomer of dibutyryl cAMP, or (v) an enantiomer of cAMP;  
which component reduces overcomes inhibition of growth-promoting effects of endogenous morphogens *in vitro*;  
  
thereby promoting neuronal cell dendritic growth.
- 3 - 4. **(Canceled)**
5. **(Currently amended)** The method of any one of claims 1-2, 39, 40, and 41, wherein said morphogen activity is endogenous.
6. **(Currently amended)** The method of any one of claims 1-2, 39, 40, and 41, wherein said morphogen activity is the result of an exogenously provided morphogen.
7. **(Currently amended)** The method of any one of claims 2, 39, 40, and 41, wherein said composition further comprises a morphogen.
8. **(Currently amended)** The method of any one of claims 1-2, 39, 40, and 41, wherein said neuron is injured by Alzheimer's disease, Parkinson's disease, Huntington's disease, senile dementia, alcohol-induced dementia, or stroke.
- 9 - 15. **(Canceled)**

16. **(Previously presented)** The method of claim 7, wherein said morphogen comprises an amino acid sequence selected from a sequence:
- (a) having at least 70% homology with the C-terminal seven-cysteine skeleton of human OP-1 (Osteogenic Protein 1), residues 330-431 of SEQ ID NO: 2;
  - (b) having greater than 60% amino acid sequence identity with said C-terminal seven-cysteine skeleton of human OP-1;
  - (c) defined by Generic Sequence 7, SEQ ID NO: 4;
  - (d) defined by Generic Sequence 8, SEQ ID NO: 5;
  - (e) defined by Generic Sequence 9, SEQ ID NO: 6;
  - (f) defined by Generic Sequence 10, SEQ ID NO: 7; or
  - (g) defined by OPX, SEQ ID NO: 3.
17. **(Previously presented)** The method of claim 7, wherein said morphogen is human OP-1 (Osteogenic Protein 1), mouse OP-1, human OP-2 (Osteogenic Protein 2), mouse OP-2, 60A, GDF-1 (Growth/Differentiation Factor-1), BMP2A (Bone Morphogenesis Protein 2A), BMP2B (Bone Morphogenesis Protein 2B), DPP (Decapentaplegic), Vgl, Vgr-1 (Vgl-related sequence), BMP3 (Bone Morphogenesis Protein 3), BMP5 (Bone Morphogenesis Protein 5), or BMP6 (Bone Morphogenesis Protein 6).
18. **(Previously presented)** The method of claim 7, wherein said morphogen is OP-1 (Osteogenic Protein 1).
- 19-34. **(Canceled)**
35. **(Currently amended)** The method of any one of claims 1-2, 39, and 40, wherein said morphogen activity is activity of OP-1 (Osteogenic Protein 1).
36. **(Canceled)**
37. **(Currently amended)** The method of any one of claims 1, 2, 34 or 36-2, 39, 40, and 41, wherein said neuron is a sympathetic neuron.

38. **(Canceled)**
39. **(Currently amended)** A method for reducing inhibition of a morphogen activity in a neuron *in vitro*, comprising contacting the neuron with a composition, the composition comprising a component selected from:
- (i) a monoclonal antibody to a gp130 protein, (ii) phosphatidylinositol-specific phospholipase C (PI-PLC), (iii) a (2-p-bromocynnamylaminoethyl)-5-isoquinolinesulfonamide, (iv) an enantiomer of dibutyl cAMP, or (v) an enantiomer of cAMP; which component reduces inhibition of the morphogen activity in a neuron *in vitro*;
- thereby increasing the morphogen activity, resulting in the neuron's ~~proliferation, growth, and maintenance of the differentiated state~~ dendritic outgrowth.
40. **(Currently amended)** A method of reducing dendritic retraction of a neuron ~~induced by a neurotrophic cytokine~~ *in vitro*, comprising contacting the neuron with a composition comprising a ~~neurotrophic cytokine antagonist component~~ selected from the group consisting of a monoclonal antibody to a gp130 protein and phosphatidylinositol-specific phospholipase C (PI-PLC), which ~~antagonist component~~ antagonist component overcomes inhibition of morphogen activity *in vitro*, thereby reducing dendritic retraction.
41. **(Currently amended)** A method of reducing inhibition of OP-1 (Osteogenic Protein 1) stimulated dendritic growth ~~by a neurotrophic cytokine~~ *in vitro*, comprising contacting a neuron with a composition comprising a ~~neurotrophic cytokine antagonist component~~ selected from the group consisting of: a monoclonal antibody to a gp130 protein and phosphatidylinositol-specific phospholipase C (PI-PLC), which ~~antagonist component~~ antagonist component overcomes inhibition of a morphogen activity *in vitro*, thereby reducing the inhibition of OP-1 stimulated dendritic growth.
